Как установить IP-параметры HP iLO через консоль сервера VMware ESXi.

При развертывании инфраструктуры VMware vSphere на базе серверов HP всегда требуется задать параметры IP-идентификации для интерфейса удаленной консоли iLO. Обычно это делается в настройках сервера, но удобнее сделать это из консоли ESXi, если вы используете кастомизированную <u>сборку ESXi под HP</u> (а ее надо использовать, так как некоторые девайсы могут просто не работать, поскольку в стандартной сборке под них нет драйверов).

Для начала откроем на хосте ESXi доступ по SSH в разделе Security Profile, стартовав соответствующий сервис:
